### **CONTEMPORARY LIGHT MACHINEGUNS**

Ah, machineguns, the source of many wet dreams and desires by all those fans of old movies with macho actors. Light machineguns are weapons exclusively used by the military (the federal law of 1999 interdict their possession from civilians). They can be carried by infantrymen (sometimes with difficulty). A second man though is often necessary to transport the tapes of ammunition. Their purpose is to cause suppressive fire, forcing the enemy to keep cover. It compensates for its obvious lack of accuracy by firing long bursts, causing a large spray of projectiles to be sent in the direction of the adversary.

Machineguns are used in laid down / sniper positions, with a bipod. If the gunner squats or is standing up, the range doesn't amount to much anymore. So if you want to play Rambo do it only at very short ranges.

Type: Light machinegun
Accuracy: +1
Availability: Poor
Availability: Poor
Cartridge: 7.62x54 mm (6D6)
Reliability: very reliable
Range: 550 meters
Cost: 830 eb

Concealability: Non concealable
Magazine: boîte de 200 ou bande
Rate of fire: 2/40

Cost: 330 eb
